

## **Application Note: Flex DP Upgrades November 2011**

### **Included Files:**

PodWare\_V5.68.0\_Beta  
DspNetPlus\_2003V1080  
TFA600HWDPv4 Beta  
TFA600HDPv6 Beta

### **Parts needed:**

2 x 4k7 1/4w resistors

### **Process:**

The amplifier must be removed from the unit, by removing the rear flygear, and taking out the metal panel.

The Input card must be removed from the metal panel by removing the small posi-drive screws from the XLR connectors on the front side of the metal panel, and removing the two wiring looms from the PCB.

Two 4k7 1/4w resistors should be soldered into holes R9 and R10 on the PCB.

The unit can now be reassembled.

On the computer, install the new version of Podware (5.68)

Update the firmware of the cabinet to 2003V1080

Then load the new settings file dependant on the horn flare of the cabinet.
